

Why Retrofit?

When Safety is Part of the Design, We Can Save Lives Together

With new laws come new products. An opportunity lies before you to broaden your resources and attempt new products which in many ways will outperform the old brands. For your drain cover needs, we suggest our DS 360M Anti-Entrapment Suction Outlet Cover. The only "ROUND" drain cover available made of industry proven UV protected and chemical resistant rigid PVC Material.

The DS 360M cover is designed to retrofit any sump from 5" to 8" in diameter as well as cut off pipes 1-1/2" to 2-1/2". Our cover was also designed to cover equalizer lines and still remain "pool cleaner" friendly. With four mounting slots and two versatile mounting kits available; the DS 360M can provide a sound and secure attachment to any of these applications using either our DS 360MAa anchor kit or our Uni-Screw kit with patented security tool.

Not only is the DS 360M a must have for child friendly applications, it even exceeds the VGB standards by meeting the stringent 1.5 F.P.S. State of Florida Rule at 123 G.P.M. and it's design minimizes hair entanglement and precludes risk of limb and or body entrapment, if installed as per manufacturers installation instructions. This combination of features makes the DS 360M a sure fit for your drain cover needs.
