

It is imperative all ASME/ANSI A112.19.8-2007 and ASME/ANSI A112.19.17 safety devices are installed as per manufacturers' installation instructions. It is also highly recommended a licensed pool professional install these products. If a suction outlet cover is not attached properly, or posted flow rate is exceeded, catastrophic failure could result. If an SVRS is not installed as per manufacturer's installation manual, proper performance may not be the end result.

Child safety is all of our goals; READ AND FOLLOW THE INSTRUCTIONS.
